

Mender Configure Add-on

Seamlessly configure applications and devices remotely

Key Features

- ✓ **Ecosystem Integration:** Seamlessly integrate with ERPs, back office platforms, and other business operations to reuse infrastructure and security credentials and eliminate redundant processes, maintenance, and costs.
- ✓ **Granular Configuration Control:** Pre-configure devices or easily change configurations across devices. Define exactly how any configuration is applied to a device, including devices running different operating system distributions and services, and custom application settings.
- ✓ **Advanced Troubleshooting & Reporting:** Easily identify and remediate any configuration deployment errors. Leverage direct visibility for configuration update status, current configuration state, errors, and audit logs. Analyze logs to identify the root cause of any failures.
- ✓ **Enhanced security:** Protect device configurations by controlling configuration updates to the user level. Limit which users can configure devices with role-based access control, complete with a history of settings applied to individuals devices by user.

Remote configuration: Customize each device according to its environment

Reduce costs, eliminate redundancy, and increase efficiency and security with remote application and device configuration capabilities.

With the **Mender Configure Add-on**, easily and seamlessly configure and deploy updates to devices at scale.

Leverage existing infrastructure, such as ERPs, to pre-configure or change device configuration at scale, eliminating redundancy and costs. Manage security with granular update configuration control, audits, and reports. Elevate and customize your device management capabilities with the Mender Configure Add-on.

Why Mender Configure Add-on:

- ✓ **Reduce costs.** Eliminate redundant operations and costs with granular configuration controls by device attributes, environments, and more.
- ✓ **Save time.** Easily pre-configure or change device configurations remotely. Leverage existing infrastructure and security credentials to automate device configuration at scale.
- ✓ **Ensure security.** Reduce risk with controlled device configuration, audit logs, and reporting.

Requirements

All Mender Add-ons require Mender. Features depend on the underlying Mender version; some features are only available with Mender Enterprise.

Support

All Mender Add-ons receive the same support as the underlying Mender license; check your Mender license for more details on support.
